

Date : December 17, 2020

CERTIFICATE OF ANALYSIS – GC PROFILING

SAMPLE IDENTIFICATION

**Internal code :** 20L03-PSC03

**Customer identification :** Rough Lemon Petitgrain - CIJA-2020-01

**Type :** Essential oil

**Source :** *Citrus jambhiri*

**Customer :** Pacha Soap Co.

ANALYSIS

**Method:** PC-MAT-014  - Analysis of the composition of an essential oil or other volatile liquid by FAST GC-FID (in French); identifications validated by GC-MS.

**Analyst :** Sylvain Mercier, M. Sc., Chimiste

**Analysis date :** December 08, 2020

Checked and approved by :

Alexis St-Gelais, M. Sc., chimiste 2013-174

Notes: This report may not be published, including online, without the written consent from Laboratoire PhytoChemia. This report is digitally signed, it is only considered valid if the digital signature is intact. The results only describe the samples that were submitted to the assays.

## PYHSICOCHEMICAL DATA

**Physical aspect:** Light yellow liquid

**Refractive index:**  $1.4731 \pm 0.0003$  (20 °C; method PC-MAT-016)

**Optical rotation:** +66.2° (20 °C, acetone,  $c = 1.8$ )

## CONCLUSION

No adulterant, contaminant or diluent has been detected using this method. Literature suggests that rough lemon petitgrain (leaf) oil composition is quite variable<sup>1-4</sup>, precluding a definitive conclusion as per sample's botanical identity, but the sample features reasonable similarities with the results from Lota *et al* 2002.<sup>3</sup>

<b>Consolidated total</b>	<b>97.98%</b>	

tr: The compound has been detected below 0.005% of total signal.

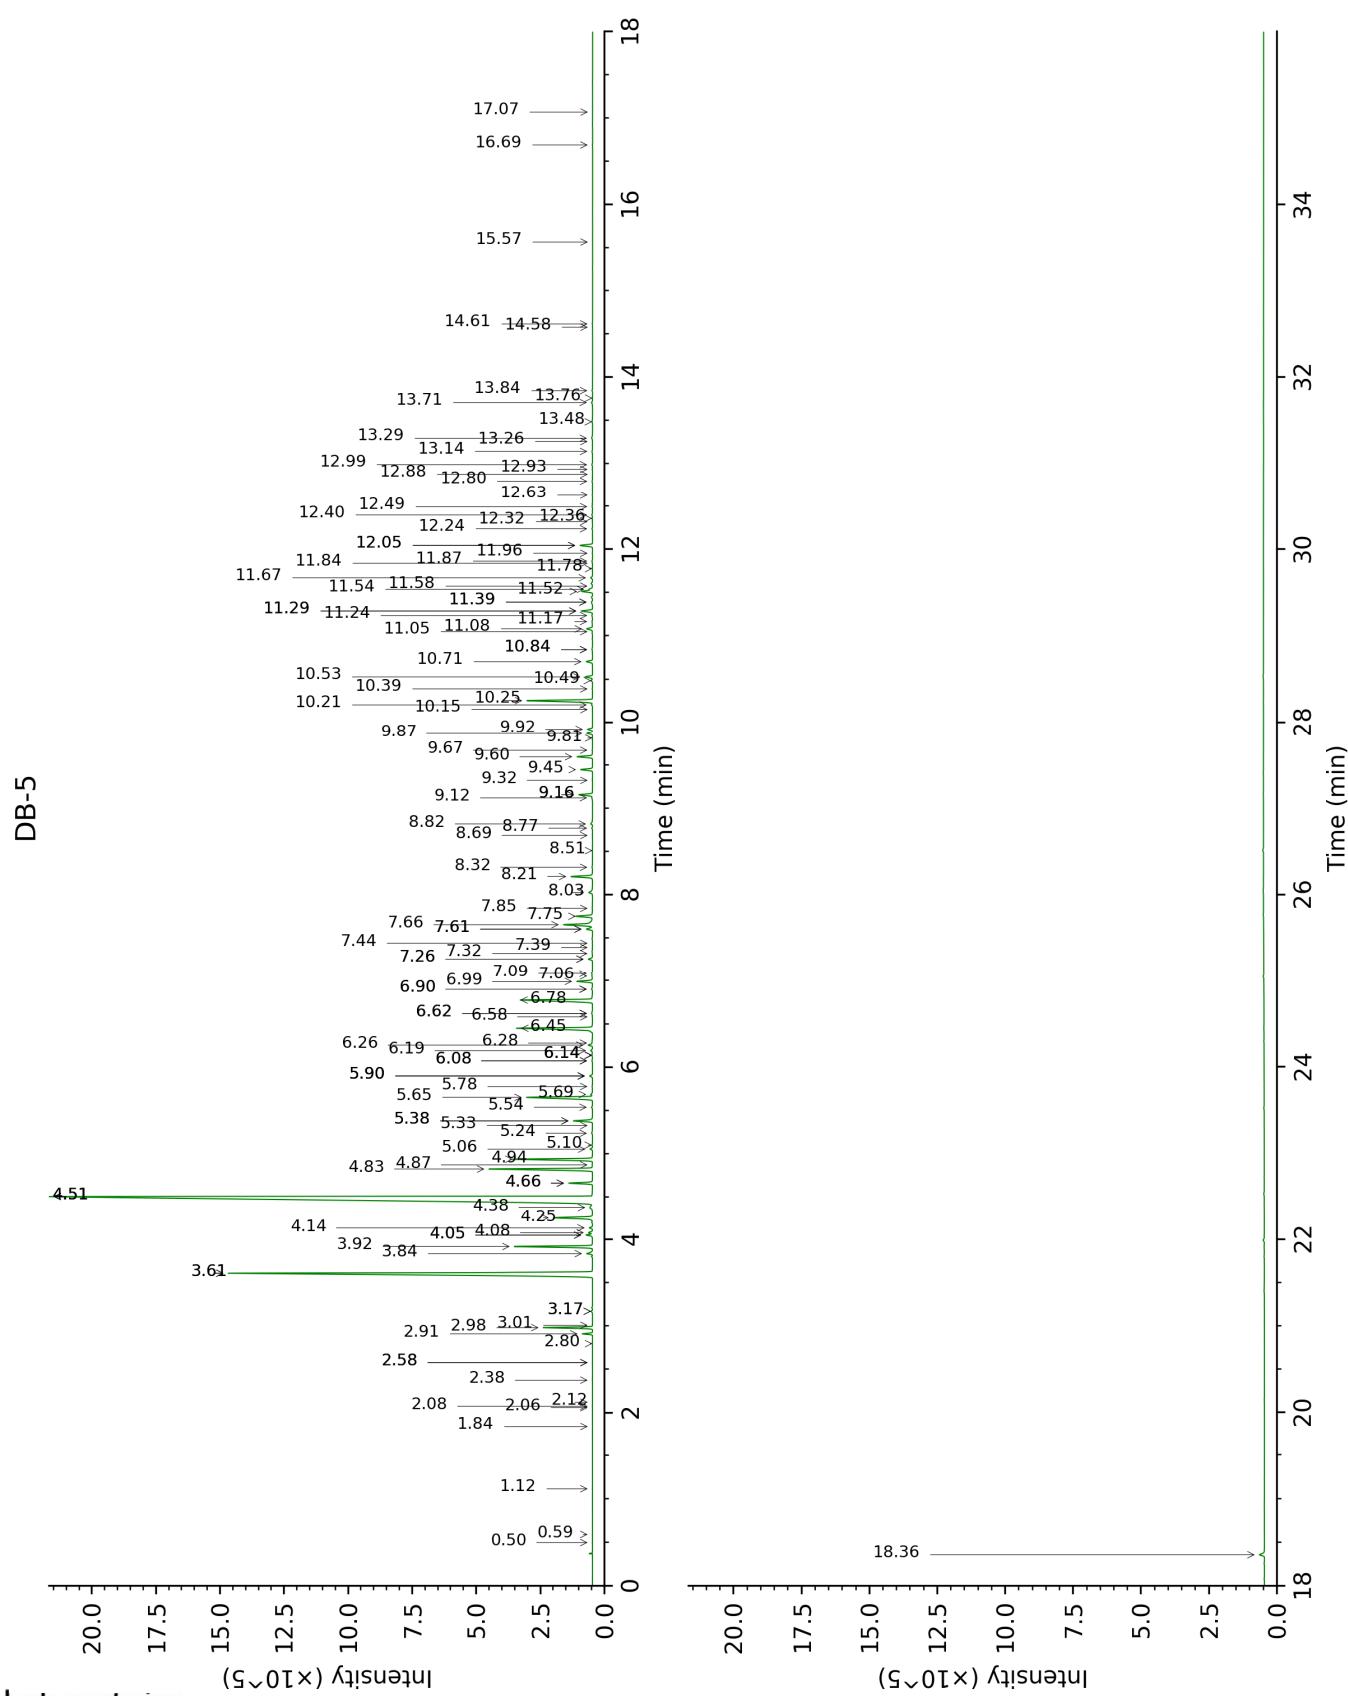

Note: no correction factor was applied

**About "consolidated" data:** The table above presents the breakdown of the sample volatile constituents after applying an algorithm to collapse data acquired from the multi-columns system of PhytoChemia into a single set of consolidated contents. In case of discrepancies between columns, the algorithm is set to prioritize data from the most standard DB-5 column, and smallest values so as to avoid

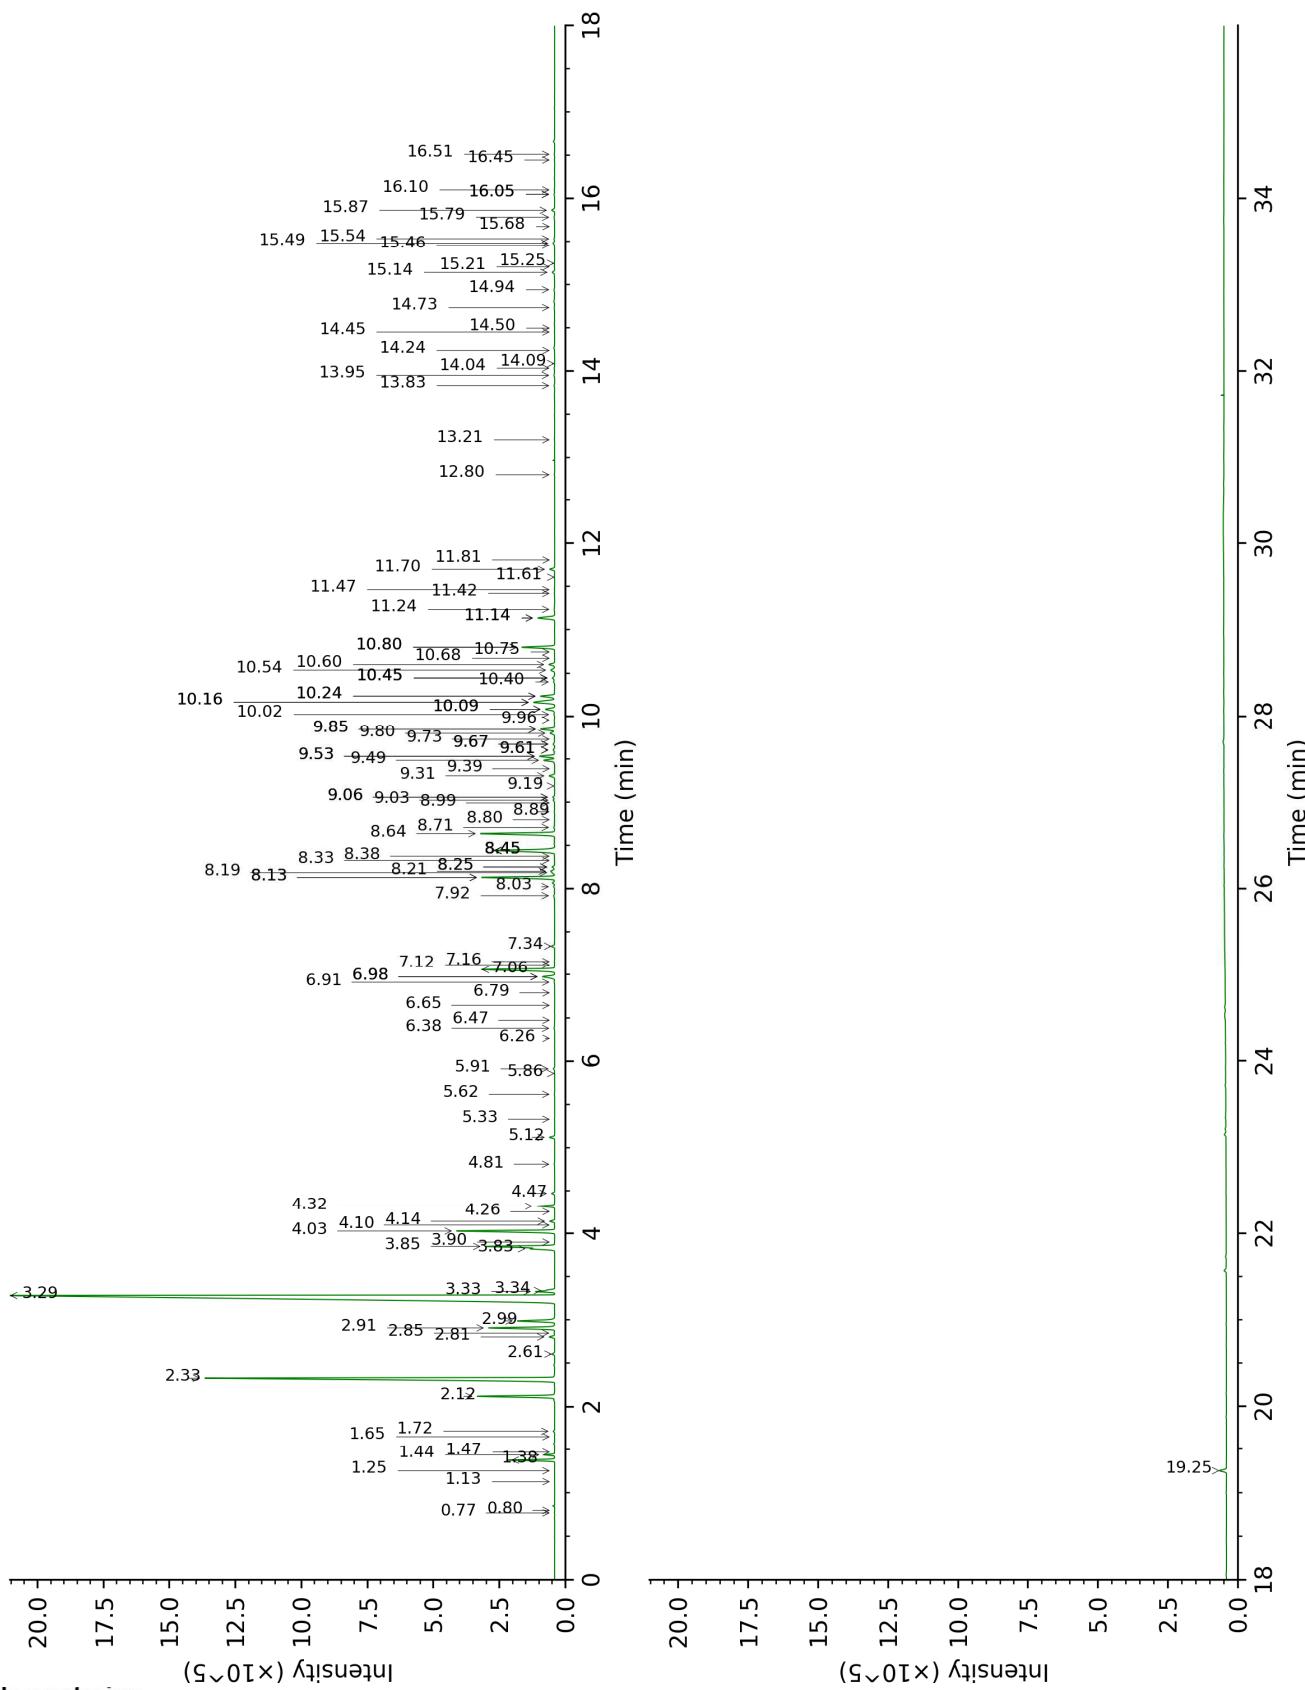

overestimating individual content. This process is semi-automatic. Advanced users are invited to consult the “Full analysis data” table after the chromatograms in this report to access the full untreated data and perform their own calculations if needed.

**Unknowns:** Unknown compounds’ mass spectral data is presented in the “Full analysis data” table. The occurrence of unknown compounds is to be expected in many samples, and does not denote particular problems unless noted otherwise in the conclusion.

This page was intentionally left blank. The following pages present the complete data of the analysis.

\*: Two or more compounds are coeluting on this column

[xx]: Duplicate percentage due to coelutions, not taken into account in the consolidated total

†: Peaks apexes were resolved, but peaks overlapped and were summed for analysis

tr: The compound has been detected below 0.005% of total signal.

Note: no correction factor was applied

R.T.: Retention time (minutes)

R.I.: Retention index
